

IBM MQ V9 System Administration (using Linux for labs)

Course code: WM154G

This course provides technical professionals with the skills that are needed to administer IBM MQ queue managers on distributed operating systems and in the Cloud. In addition to the instructor-led lectures, you participate in hands-on lab exercises that are designed to reinforce lecture content. The lab exercises use IBM MQ V9.0, giving you practical experience with tasks such as handling queue recovery, implementing security, and problem determination. Note: This course does not cover any of the features of MQ for z/OS or MQ for IBM i. For information about other related courses, see the IBM Training website: <http://www.ibm.com/training>

Who is the course for

This course is designed for technical professionals who require the skills to administer IBM MQ queue managers on distributed operating systems, in the Cloud, or on the IBM MQ Appliance.

What we teach you

Describe the IBM MQ deployment options

Plan for the implementation of IBM MQ on-premises or in the Cloud

Use IBM MQ commands and the IBM MQ Explorer to create and manage queue managers, queues, and channels

Use the IBM MQ sample programs and utilities to test the IBM MQ network

Enable a queue manager to exchange messages with another queue manager

Configure client connections to a queue manager

Use a trigger message and a trigger monitor to start an application to process messages

Implement basic queue manager restart and recovery procedures

Use IBM MQ troubleshooting tools to identify the cause of a problem in the IBM MQ network

Plan for and implement basic IBM MQ security features

Use accounting and statistics messages to monitor the activities of an IBM MQ system

Define and administer a simple queue manager cluster

Required skills

Technical Introduction to IBM MQ - (WM103G)

Technical Introduction to IBM MQ - (ZM103G)

Basic knowledge of IBM MQ V9 concepts and features, obtained either through experience or by successfully completing

Technical Introduction to IBM MQ (WM103G) or Technical Introduction to IBM MQ (ZM103G)

Ability to invoke standard functions within the operating system that is used in the lab exercises

Some knowledge of TCP/IP configuration

Course outline

- Course introduction
- IBM MQ review
- IBM MQ installation and deployment options
- Creating a queue manager and queues
- Exercise: Using commands to create a queue manager and queues
- Introduction to IBM MQ Explorer
- Exercise: Using IBM MQ Explorer to create queue managers and queues
- Testing the IBM MQ implementation

IBM MQ V9 System Administration (using Linux for labs)

- Exercise: Using IBM MQ sample programs to test the configuration
- Implementing distributed queuing
- Exercise: Connecting queue managers
- IBM MQ clients Exercise: Connecting an IBM MQ client
- Implementing trigger messages and monitors
- Exercise: Implementing a trigger monitor
- Diagnosing problems
- Exercise: Running an IBM MQ trace
- Implementing basic security in IBM MQ
- Exercise: Controlling access to IBM MQ
- Backing up and restoring
- IBM MQ messages and object definitions
- Exercise: Using a media image to restore a queue
- Exercise: Backing up and restoring
- IBM MQ object definitions
- Introduction to queue manager clusters
- Exercise: Implementing a basic cluster
- Monitoring and configuring
- IBM MQ for performance
- Exercise: Monitoring IBM MQ for performance
- Course summary
