Microsoft Identity Manager – Implementation and Development

Course code: GOC75

This five-day advanced course prepares students to plan, deploy and implement, maintain and operate and customize Microsoft Identity Manager.

Microsoft Certified Master Guaranteed

All our trainers that teach the course are certified to the highest professional level of **MCM:Directory** (Microsoft Certified

Master:Directory Services) and have years of experience in the identity management and security field.

At course completion students will be able

Plan, design and deploy the Microsoft Identity Manager

Effectively use the GUI and web interfaces

Understand the concepts of modern identity management systems

Be able to design attribute flow as well as configure provisioning and deprovisioning

Understand and be able to effectively develop custom .NET extensions

Efficiently manage and use the self-service password reset modules

Manage user accounts and groups, their access control and to control their certificates and smart cards

Course outline

Planning the installation
