

ITIL® 4 Specialist: Sustainability in Digital and IT

Course code: H38DRS

Technology has transformed the way we work, socialize, purchase goods, and interact with services—fueling new behaviors, demands and experiences. Consumers and users now expect more, which puts pressure on providers to deliver higher quality IT-enabled products and services at a quicker pace. Now more than ever, organizations are being held accountable for the social and environmental impacts of their operations. Based on main ITIL 4 framework, the extension module ITIL® 4 Specialist: Sustainability in Digital and IT explores how service organizations may address sustainability challenges in relation to their digital and IT strategies, tactics, and operations—focusing on the ITIL Service Value Chain and ITIL practices. This course considers the role that IT and digitally-enabled services have in relation to the environment. It explores opportunities for positive impact by adopting and driving sustainable and ethical behavior and a mindset that goes beyond individuals and impacts businesses at an organizational level. The module highlights key sustainability competencies and capabilities that service organizations should develop to effectively address current and future sustainability challenges, including a framework to support organizations during procurement and supply chain activities which can help interactions across the supply chain to practice sustainable IT. The exam is included in the price of the training.

Who is the course for

- IT/digital/service strategists
- Service designers/architects
- Product/service managers
- ITSM managers and aspiring ITSM managers
- Managers of all levels involved in shaping direction and strategy or developing a continually improving team
- Existing ITIL qualification holders wishing to develop their knowledge

What we teach you

The purpose of the ITIL 4 Sustainability in Digital and IT qualification is:

- To provide candidates with an understanding of what 'sustainability' means and how it can deliver value
- To provide candidates with an understanding of the practical steps required to develop and implement a sustainability strategy
- To provide the candidate with the practical skills necessary to enable an organization to deliver value by introducing sustainable practices.

Required skills

There are no prerequisites for the ITIL 4 Extension Modules. However, candidates must have attended an accredited training course for this module.
