Course code: CPP_STD

Who is the course forThe course is intended for C++ developers who want to expand their knowledge and make effective use of C++. What we teach youThe course discusses topics such as C++ standard libraries, functions and classes templates, polymorphic classes and Design Patterns. The demonstrated techniques are strictly platform-neutral and can be used in Windows, Unix, Linux etc. Required skillsSkills corresponding to the C and C++ programming languages course (MSCPP1) Teaching methodsExpert instruction with practical examples, computer practice

Who is the course for

The course is intended for C++ developers who want to expand their knowledge and make effective use of C++.

What we teach you

The course discusses topics such as C++ standard libraries, functions and classes templates, polymorphic classes and

Design Patterns. The demonstrated techniques are strictly platform-neutral and can be used in Windows, Unix, Linux

etc.

Required skills

Skills corresponding to the C and C++ programming languages course (MSCPP1)

Teaching methods

Expert instruction with practical examples, computer practice
