

Certified Secure Computer User

Course code: CSCU

CSCU - Certified Secure Computer User is a course focused on regular users of information technologies. The participants will learn how to handle their data, personal computer, notebook or wireless network securely. The main topic of the course is the security on the Internet, concerning the common use of personal e-mail accounts, social networks or online shopping. In addition we will touch also topics not connected to IT and show the non-technical ways of hacking, identity theft a pickpockets' tricks. The whole course will be supplemented by real-life examples, case studies, concerning crime victims from real or virtual world. As a matter-of-course we will teach you how to protect yourself and in the first place how to precede these attacks, so that you won't become one of the victims. The course concludes with the certification test CSCU 112-12, which is already included in the course price.

Who is the course for

The course is designed for company or private computer users without any technical knowledge concerning the operation system (OS) management. The course provides complex overview of risks, which we are confronted with while using computers or mobile devices for communication on the internet, and teach us to defend ourselves against these risks. The course is required for taking the certification exam CSCU 112-12 and will also prepare you for the exam. The price of the exam is already included in the price of the course. The exam is in English, takes two hours and the participants take it at the end of the course.
