CISSP - Certified Information Systems Security Professional

Course code: CISSP

Five-days instructor-led training prepares students for the CISSP exam covering exam topics from all the domains and demonstrates the tested problems on sample questions based on official study material. If you have already attended the SSCP training course please understand that this CISSP training is repeating about 80% of the topics already covered by the SSCP.

Who is the course for

This training is intended as an entry into the topics of information security. It can also be understood as a recapitualtion of the terms and infosec principles before undertaking the CISSP exam. The course is a very fast paced preparation for the CISSP exam. Some topics will be new for some of the students. Some others will be just a recap for them. The training could be understood as a kick-off fast intro into the infosec problems or a recap and hint on what one does not know well yet for others who are more experienced in the field. Student groups usually wary widelly which provides for interesting discussions and knowledge sharing among them.

Teaching methods

We are going fast through the hundreds of the infosec terms, principles and problems so that the students get overall understanding of what security means in whole. We are also going through some sample questions in order kick-off students for their own preparation to the CISSP exam.
