

Designing and Implementing Microsoft DevOps solutions

Course code: MOC AZ-400

This course provides the knowledge and skills to design and implement DevOps processes and practices. Students will learn how to plan for DevOps, use source control, scale Git for an enterprise, consolidate artifacts, design a dependency management strategy, manage secrets, implement continuous integration, implement a container build strategy, design a release strategy, set up a release management workflow, implement a deployment pattern, and optimize feedback mechanisms.

Affiliate	Duration	Course price	ITB
Praha	4	29 200 Kč	40
Brno	4	29 200 Kč	40
Bratislava	4	1 216 €	40

The prices are without VAT.

Course terms

Date	Duration	Course price	Type	Course language	Location
28.10.2024	4	1 520 €	Presence	CZ/SK	GOPAS Bratislava prezenčne
25.11.2024	4	29 200 Kč	Presence	CZ/SK	GOPAS Praha
09.12.2024	4	1 216 €	Online	CZ/SK	GOPAS Bratislava online
09.12.2024	4	29 200 Kč	Online	CZ/SK	GOPAS Praha online
03.03.2025	4	29 200 Kč	Presence	CZ/SK	GOPAS Praha
23.06.2025	4	29 200 Kč	Presence	CZ/SK	GOPAS Praha

The prices are without VAT.

At course completion students will be able

- Plan for the transformation with shared goals and timelines
- Select a project and identify project metrics and KPIs
- Create a team and agile organization structure
- Describe the benefits of using Source Control
- Migrate from TFVC to Git
- Scale Git for Enterprise DevOps
- Recommend artifact management tools and practices
- Abstract common packages to enable sharing and reuse
- Migrate and consolidate artifacts
- Migrate and integrate source control measures
- Manage application config and secrets
- Develop a project quality strategy
- Plan for secure development practices and compliance rules
- Implement and manage build infrastructure
- Explain why continuous integration matters
- Implement continuous integration using Azure DevOps

Designing and Implementing Microsoft DevOps solutions

Manage code quality including: technical debt, SonarCloud, and other tooling solutions

Manage security policies with open source, OWASP, and WhiteSource Bolt

Implement a container strategy including how containers are different from virtual machines and how microservices use containers

Implement containers using Docker

Inspect open source software packages for security and license compliance to align with corporate standards

Configure build pipeline to access package security and license rating

Configure secure access to package feeds

Inspect codebase to identify code dependencies that can be converted to packages

Identify and recommend standardized package types and versions across the solution

Refactor existing build pipelines to implement version strategy that publishes packages

Manage security and compliance

Differentiate between a release and a deployment

Define the components of a release pipeline

Explain things to consider when designing your release strategy

Classify a release versus a release process and outline how to control the quality of both

Describe the principle of release gates and how to deal with release notes and documentation

Explain deployment patterns, both in the traditional sense and in the modern sense

Choose a release management tool

Explain the terminology used in Azure DevOps and other Release Management Tooling

Describe what a Build and Release task is, what it can do, and some available deployment tasks

Classify an Agent, Agent Queue, and Agent Pool

Explain why you sometimes need multiple release jobs in one release pipeline

Differentiate between multi-agent and multi-configuration release job

Use release variables and stage variables in your release pipeline

Deploy to an environment securely using a service connection

Embed testing in the pipeline

List the different ways to inspect the health of your pipeline and release by using alerts, service hooks, and reports

Create a release gate

Describe deployment patterns

Implement Blue Green Deployment

Implement Canary Release

Implement Progressive Exposure Deployment

Configure crash report integration for client applications

Develop monitoring and status dashboards

Implement routing for client application crash report data

Designing and Implementing Microsoft DevOps solutions

Implement tools to track system usage, feature usage, and flow

Integrate and configure ticketing systems with development team's work management

Implement a mobile DevOps strategy

Apply infrastructure and configuration as code principles.

Deploy and manage infrastructure using Microsoft automation technologies such as ARM templates, PowerShell, and Azure CLI

Describe deployment models and services that are available with Azure

Deploy and configure a Managed Kubernetes cluster

Deploy and configure infrastructure using 3rd party tools and services with Azure, such as Chef, Puppet, Ansible, SaltStack, and Terraform

Define an infrastructure and configuration strategy and appropriate toolset for a release pipeline and application infrastructure

Implement compliance and security in your application infrastructure

Design practices to measure end-user satisfaction

Design processes to capture and analyze user feedback from external sources

Design routing for client application crash report data

Recommend monitoring tools and technologies

Recommend system and feature usage tracking tools

Analyze alerts to establish a baseline

Analyze telemetry to establish a baseline

Perform live site reviews and capture feedback for system outages

Perform ongoing tuning to reduce meaningless or non-actionable alerts

Prerequisites

Knowledge in extent of the courses which are listed in the bellow sections **Previous Courses** and **Related Courses**

Good understanding of TCP/IP and DNS technologies

Course outline

Transformation Planning

Project Selection

Team Structures

Migrating to Azure DevOps

What is Source Control

Benefits of Source Control

Types of Source Control Systems

Introduction to Azure Repos

Introduction to GitHub

Migrating from Team Foundation Version Control (TFVC) to Git in Azure Repos

Authenticating to Git in Azure Repos

Designing and Implementing Microsoft DevOps solutions

How to Structure your Git Repo

Git Branching Workflows

Collaborating with Pull Requests in Azure Repos

Why care about GitHubooks

Fostering Inner Source

Packaging Dependencies

Package Management

Migrating and Consolidating Artifacts

The concept of pipelines in DevOps

Azure Pipelines

Evaluate use of Hosted vs Private Agents

Agent Pools

Pipelines and Concurrency

Azure DevOps and Open Source Projects (Public Projects)

Azure Pipelines YAML vs Visual Designer

Continuous Integration Overview

Implementing a Build Strategy

Integration with Azure Pipelines

Integrate External Source Control with Azure Pipelines

Set Up Private Agents

Analyze and Integrate Docker Multi-Stage Builds

Introduction to Security

Implement secure and compliant development process

Rethinking application config data

Manage secrets, tokens, and certificates

Implement tools for managing security and compliance in a pipeline

Managing Code Quality

Managing Security Policies

Implementing a Container Build Strategy

Package security

Open source software

Integrating license and vulnerability scans

Implement a versioning strategy (git version)

Introduction to Continuous Delivery

Release strategy recommendations

Building a High-Quality Release pipeline

Designing and Implementing Microsoft DevOps solutions

Choosing a deployment pattern
Choosing the right release management tool
Create a Release Pipeline
Provision and Configure Environments
Manage and Modularize Tasks and Templates
Integrate Secrets with the release pipeline
Configure Automated Integration and Functional Test Automation
Automate Inspection of Health
Introduction to Deployment Patterns
Implement Blue Green Deployment
Feature Toggles
Canary Releases
Dark Launching
AB Testing
Progressive Exposure Deployment
Implement Tools to Track System Usage, Feature Usage, and Flow
Implement Routing for Mobile Application Crash Report Data
Develop Monitoring and Status Dashboards
Integrate and Configure Ticketing Systems
Introduction to Mobile DevOps
Introduction to Visual Studio App Center
Manage mobile target device sets and distribution groups
Manage target UI test device sets
Provision tester devices for deployment
Create public and private distribution groups
Infrastructure as Code and Configuration Management
Create Azure Resources using ARM Templates
Create Azure Resources using Azure CLI
Create Azure Resources by using Azure PowerShell
Desired State Configuration (DSC)
Azure Automation with DevOps
Additional Automation Tools
Deployment Modules and Options
Azure Infrastructure-as-a-Service (IaaS) Services
Azure Platform-as-a-Service (PaaS) services
Serverless and HPC Computer Services

Azure Service Fabric

Azure Kubernetes Service

Chef

Puppet

Ansible

Terraform

Security and Compliance Principles with DevOps

Azure security Center

The inner loop

Continuous Experimentation mindset

Design practices to measure end-user satisfaction

Design processes to capture and analyze user feedback

Design process to automate application analytics

Site Reliability Engineering

Analyze telemetry to establish a baseline

Perform ongoing tuning to reduce meaningless or non-actionable alerts

Analyze alerts to establish a baseline

Blameless Retrospectives and a Just Culture

Preparation for Microsoft certification

Most Microsoft certification exams do not require students to attend an official MOC course in order to pass the exam.

This applies to all certifications except for MCM

Official Microsoft MOC courses as well as our own GOC courses are good ways of preparation for Microsoft certifications such as MCP, MTA, MCSA, MCSE or MCM

This does not mean that official MOC courses would serve as the only necessary preparation. The primary goal of an MOC course is to provide for sufficient theoretical knowledge and practical experience to effectively work with the related product

MOC courses usually cover most of the topics required by their respective certification exams, but often do not give every topic the same amount of time and emphasis as may be required to completely pass the exam.
