

Microsoft Power BI Desktop

Course code: PBID

Microsoft Power BI Desktop is a full featured alternative to the Power BI addins / features that can be integrated into Microsoft Excel. Both alternatives are intended for the creation of corporate decision-making reports in whole range of the problematics. These tools are able to access data stored in almost any format in the file system or in a variety of server data sources, perform various data manipulation (like combination of individual datasets based on the interconnecting keys, additional calculations, creation of hierarchical structures, etc.), to data aggregation and presentation of results in the form of graphic reports. With Microsoft Power BI Desktop you can get access to modern, sophisticated, flexible, but relatively simple method of creating business reports, regardless of Microsoft Office version used in your company.

Microsoft Power BI Desktop

Any experiences with databases are great advantage for this training.

Course outline

Application description

Data connection

- Live connection
- Imports
- Import from PowerPivot data model
- Update options

Background queries (PowerQuery)

Data sources

- Non-relational
- Relational
- Active vs. non-active relations
- Cardinality of relations
- Direction of cross-filter

Unexpected change of data source

Building of data model

Building & using calendar

Data categorization

Hierarchy

- Single tabular
- Multitabular
- P\C hierarchies

Column DAX functions

Tabular DAX functions

Measures

KPI

Vizualization

- Built-in
- Tables + conditional formatting
- Charts
- R script visual
- Custom
- Customization of visual (demo)
- Modification of tooltip help

Interaction

Data Drilling

Filters

- Visual level
- Page level
- Report level

Roles

Publication

- Power BI Services (Office 365)
- Content packages
- E-mail
