Who the course is for

The course is designed for everyone who wants to become familiar with basic concepts of XML and its related technologies.

What we teach you

- Create well formed XML document.
- XML validation using XSD or DTD.
- The ability to read DTD and XSD declaration.

Required skills

- The ability to edit markup text.
- Previous experience with HTML is a great advantage.

Teaching methods

Professional explanation with practical samples and examples.

Teaching materials

Powerpoint handouts and module printouts

Course syllabus

Getting started

- XML application areas.
- History of XML and HTML, SGML markup languages.
- The structure of an XML application.
- Overview of XML editors.

Introduction to XML

- Overview of XML parsers, DOM, SAX libraries.

The structured of XML

- Basic terminology: opening, closing tag, attributes.
- XML entity.
- Model of XML document, parent, child, sibling relationships.
- XML node types: element, attribute, text, comments, processing instructions.
- XML and character sets, Windows 1250, ISO 8859-2, UTF-8, UTF-16
- Well formed document

Design of XML document

- Creating data dictionary.
- Valid characters in XML names, naming convention.
- Best practices.

Document Type Definition

- Internal and external DTD.
- Instructions ELEMENT, ATTLIST.
- The sequence of child elements, alternative content.
- Multiple child element occurrence.
- Mixed content.
- A default attribute value, enumeration.

XML Namespace

- Function of XML namespace and unique identifiers.
- Mixing XML languages.
- Web languages XHTML, SVG, MathML, CML.

XML Schema

- Simple vs. complex data types.
- Restrictions and extensions.
- Ways of organizing child elements.
- Global vs. local declaration.
- Methods of designing XML schemas.

Presenting XML content

- XML and CSS styles.
- XSL transformations, and XPath.
