The prices are without VAT.

## What we teach you:

- Basic principles of OOP in general
- Using object-oriented PHP
- OOP principles production quality code

## Required skills:

- To get the training took as much as needed to control at least the basics of procedural PHP - variable field conditions, loops, functions, etc.
- Knowledge required, you can check the following exercises that you should manage without hesitation:
- Create a variable
- \$ items
- and place in the field multiple values.
- Create a function
- PrintHTML (\$ data)
- , which receives the field, and it lists its value as a bulleted list in HTML.
- Try the call to
- PrintHTML ()
- and give it a variable
- \$ items
- .
- Treat breeding function
- PrintHTML ()
- for an empty field

## Teaching methods:

- Professional explanation with practical samples and examples.

# Object-Oriented Programming in PHP

## Teaching materials:

- Powerpoint handouts and module printouts.

## Course syllabus:

Basic principles of OOP:

- Encapsulation
- Polymorphism
- Composition
- Heredity
- The exception handling

Using principles of OOP in PHP:

- Interface
- Static methods
- Abstract classes and methods
- Autoloading
- Type hinting
- Magical Methods
- Design Patterns

News in new versions of PHP

- Namespaces
- Traits
- Generators
- Anonymous functions (closures)
- Correct work with passwords
- News in PHP 7
