

Automated testing of JS applications using the Jest library

Course code: JS_TEST_JEST

This course is designed for intermediate JavaScript programmers who want to learn how to write automated tests using the Jest library. We will teach you not only how to design and implement tests, but also how to think economically and rationally about your testing efforts. To successfully complete the course, you need to know both functional and OOP approaches to JavaScript and a basic understanding of how to work with Promises at the [JS_PROG2] course level.

Affiliate	Duration	Course price	ITB
Praha	3	23 100 Kč	30
Brno	3	23 100 Kč	30
Bratislava	3	990 €	30

For whom the course is intended

This course is designed for intermediate JavaScript programmers who want to learn how to write automated tests using the Jest library.

What we will teach you

- Define and categorize tests
- Design and implement automated tests
- Test functions and classes
- Test asynchronous code
- Apply testing strategies to different situations

Required Entry Level Knowledge

- JavaScript programming at the course level [JS_PROG2]

Course outline

Introduction

- Testing and Automation
- Test Categorization
- Test Anatomy
- Js Basic tests
- Test Registration
- Assertion (matchers)
- expect() function
- the truth of the expression
- numbers
- text strings
- arrays and objects
- exceptions Asynchronous code
- Promise

Automated testing of JS applications using the Jest library

- async / await
- callback
- resolves() and rejects() matcher Initialization and cleanup
- One-time
- Repeatedly
- Order of execution Mocking
- Mock-up function
- Mocking timers and async functions
- module mocking
- partial object mocking
- mock assertion Snapshots
